Introduction

There are quite a few NFT projects that have been abandoned or were never meant to have any sort of utility in the first place. Our mission is to change that!

We create a game in which you can use all* your NFTs.

Shipy Space is a round based online game where players fight each other to climb the leaderboard and earn *Nebula Dust* tokens to craft new items for the game. *Nebula Dust* tokens and in-game items will be live on the Cardano blockchain.

We also plan to have some offline or idle farming features in the game, for those players who don't have as much time to actively play but still want a slice of the play to earn rewards.

Our most important design goals are to make the game fun and to keep it fair. There will be no pay to win aspects that influence the gameplay. But of course there will be visual perks to flex on your enemies!

Community

We want to create a strong community around the Shipy Space universe, to allow it to grow and stay fun. If you would like to be part of this community, join our Discord and follow us on Twitter. We love any kind of feedback and will try to listen to all of you. If you have any ideas, suggestions or questions, just get in touch with us.

 Website: <https://shipy.space>

 Twitter: <https://twitter.com/ShipySpace>

 Discord: <https://shipy.space/discord>

*NFT projects need to be whitelisted. New projects will be added by community vote.

Roadmap

For the latest version of our roadmap, please visit our website, <https://shipy.space>.

Game

There are multiple ways you can play *Shipy Space*. The main game mode is the online mode, where you fight against other players. The idle mode can be used to passively gain rewards, while not actively playing.

Online

In the online game mode, you fight in real-time against other players. Armed with multiple abilities and some luck, you fight for glory, experience as well as some *Nebula Dust*. The game works as a round based 1vs1 battle game. It runs in any modern browser and just requires you to be able to connect your wallet to the game. There will be multiple different utility, defensive and offensive abilities. Also, there will be special actions with effects on multiple rounds. So, a lot of strategy is involved to win a game!

Idle

For people with less time, there will also be a feature to send your spaceship exploring the vast emptiness of space. This way, you can earn rewards without having to play 24/7. The rewards will be much smaller than if you play yourself, but will add up in the long run. You can send your ship on an exploration mission for a fixed amount of time. After the mission is over, you can collect your rewards.

Game economy and rewards

While playing *Shipy Space*, you will earn experience points and *Nebula Dust*. After gaining enough experience, you will level up over time. With higher levels, new content can be unlocked.

Nebula Dust can be used to create new content in the game. To keep the game fair, the amount of *Nebula Dust* spent doesn't influence the strength of a player. However, the most exclusive and rare spaceships might require more *Nebula Dust* than others.

Each of your spaceships can earn a certain amount of *Nebula Dust* every day while fighting in the *Shipy Space Online* game mode. Idle missions will also reward you with *Nebula Dust*. Players that return to the game regularly will therefore be rewarded with more tokens.

Tokenomics

The game will use its own token called *Nebula Dust* (ticker: **NBD**). It can be used to buy new ships and other in-game items. The token is a native token on the Cardano blockchain and can also be used and traded outside the game (for example on a DEX). There will be a finite number of tokens available. They will be used for different things:

Allocation	# of tokens	Percentage
Play to earn	606.060.606	60,0%
Stake Pool Rewards	151.515.151	15,0%
Reserve	101.010.101	10,0%
Team	95.959.595	9,50%
Marketing	50.505.050	5,0%
Closed Beta	5.050.505	0,5%
The Void 	2	0,0%

Total: **1.010.101.010** Tokens

Token allocation details

Play to earn: [stake1u82gu2m6vvvh87yr9q7zjin5uza8jyfg0ce7xz37rd8u5hqhzjr8w](#)

Tokens that can be earned by playing the Shipy Space game.

Stake pool rewards: [stake1u9f5eys7uyh2ypmt2td42me0pf5tdc6s63dm8c6yqm3zneqm53u2r](#)

These tokens will be used as rewards for our ISPO.

Reserve: [stake1uxmfgtzm49frqwnw2xp3qvp6qu97h6t8hqjl0vxiccuujnqhfc50m](#)

To stay open for new ideas and use cases for the *Nebula Dust*, some tokens will be kept in the reserve for future use.

Team: [stake1uxw495uvzt6zthm74pdkdsr25zyjyh58x2ss7m39na87h9c56jceq](#)

These tokens will be given to the team. The team is allowed to use the tokens in the game, for play testing etc. We do not plan to sell these tokens on an exchange.

Marketing: [stake1u9lzqd2fk83n6j9xqw25qcwjzy5le4flq3eu8zkpcpy400c0x0wup](#)

Tokens that are used for various marketing activities like giveaways or collaborations with other projects.

Closed beta: [stake1uxvq99mc7njl5qq6jv48rnvs2p5ju7ahd7yly3t6v5tyxzcal4sfq](#)

These tokens will be distributed to the Shipy Space Beta Alien holders, who participate in our closed beta testing event.

The void 🦴

2 mysterious tokens that were lost in the void. Or maybe not?

NFTs

Spaceships

To get into space, you need a spaceship. Each spaceship also requires a pilot. This can be any* NFT you already own. The same pilot NFT can only be used once with the same spaceship. This ensures that all final spaceship NFTs are unique. However, a pilot can be used in any number of different spaceships, so you can use your favorite NFT as the pilot of your whole fleet if you want!

The most basic spaceships can be created without any additional requirements. Other spaceships require a minimum level of the player, some *Nebula Dust* or may only be available at special occasions or after completing certain achievements in the game.

If none of your NFTs are whitelisted for the game, you can suggest collections that we should add. If you are the owner of a Cardano NFT Project and interested in adding it to our game, please contact us via Discord or Twitter.

Important: We will not touch your original NFT. It will not be transferred to us. You own your NFTs all the time. We just check that you really own the NFT using a cryptographic signature (via Web 3.0 plugins like Nami wallet).

*NFT projects need to be whitelisted. New projects will be added by community vote.

Shipy Space Beta Aliens

Our own collection of NFTs is called the *Shipy Space Beta Aliens*. These weird little alien creatures have been exploring space for many light-years. They are excellent pilots. That's why they have been granted the honor of being the first species to conquer the Shipy Space universe.

Owners of these NFTs are able to participate in our *closed beta* phase. There will only be a very limited amount of *Shipy Space Beta Aliens* and you should only buy one if you want to be one of the first people who can play our game. It is not necessary to own a *Shipy Space Beta Alien* to play the game after the *closed beta* has finished.

After the *closed beta* phase, we will start adding more NFT collections that can be used as pilots for the spaceships. We will review all collections before we whitelist them. This is needed to ensure high quality and compliance with the individual licenses of other NFT collections. We also need to tweak certain parameters for each NFT collection, so every spaceship NFT looks great.

Staking & ISPO

What is an ISPO?

An initial stake pool offering is used to raise funds for developing a project. Usually, a project selects one or many stake pools that are part of the ISPO. By delegating to those pools, you can support the project without spending any ADA. The pool gets ADA rewards from producing blocks and the delegators get some additional rewards in the form of project tokens.

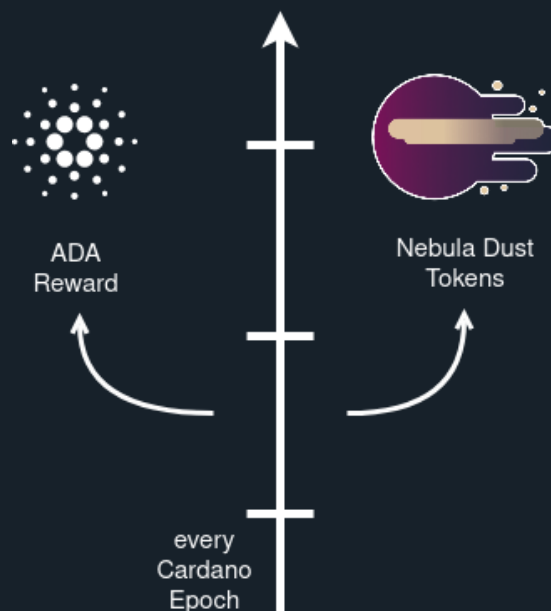

How can I participate?

You can stake with our partner pool SOLPI (www.solpi.de) to earn some *Nebula Dust*. The pool has a fixed fee of 340 ADA and a variable fee of 1%. This means that you do not have to give up your ADA rewards! You will get your normal ADA rewards plus some *Nebula Dust* on top. The ISPO starts in epoch 337 and lasts until all *Nebula Dust* tokens allocated to the ISPO are distributed.

ISPO rewards

The rewards for participating in the ISPO are calculated as follows:

- For every 10 ADA delegated to the pool, you get 1 Nebula Dust token each epoch.
- 15% of the total *Nebula Dust* supply will be distributed in the ISPO.
- The amount of Nebula Dust per staked ADA might be reduced in the future, depending on pool saturation.
- Rewards can be claimed on <https://vm.adaseal.eu>. You don't have to withdraw them every epoch, the rewards can be stacked for a maximum of 1 year before they expire.

Team 🧐

We are a young and motivated team from Switzerland that wants to create an exciting experience for your NFTs. Our primary goal is for people to have fun playing our game and add utility to as many NFT collections as possible.

Core Values 💎

Above all, our goal is to create a fun game. For this reason, there are some core values we defined:

- Complete transparency: We do not hide anything important and keep an open communication about anything project related.
- Fair game: We want a fair game for all, no matter your budget.
- Integrity: We are aware of the impact of our actions, and we will act ethically.
- Security: We strive to protect our users and keep all assets safe.
- Quality: We only ship high-quality code to production.
- Privacy: We do not collect any unnecessary information.
